# AB&I FOUNDRY

## ABOUT US

### About Us

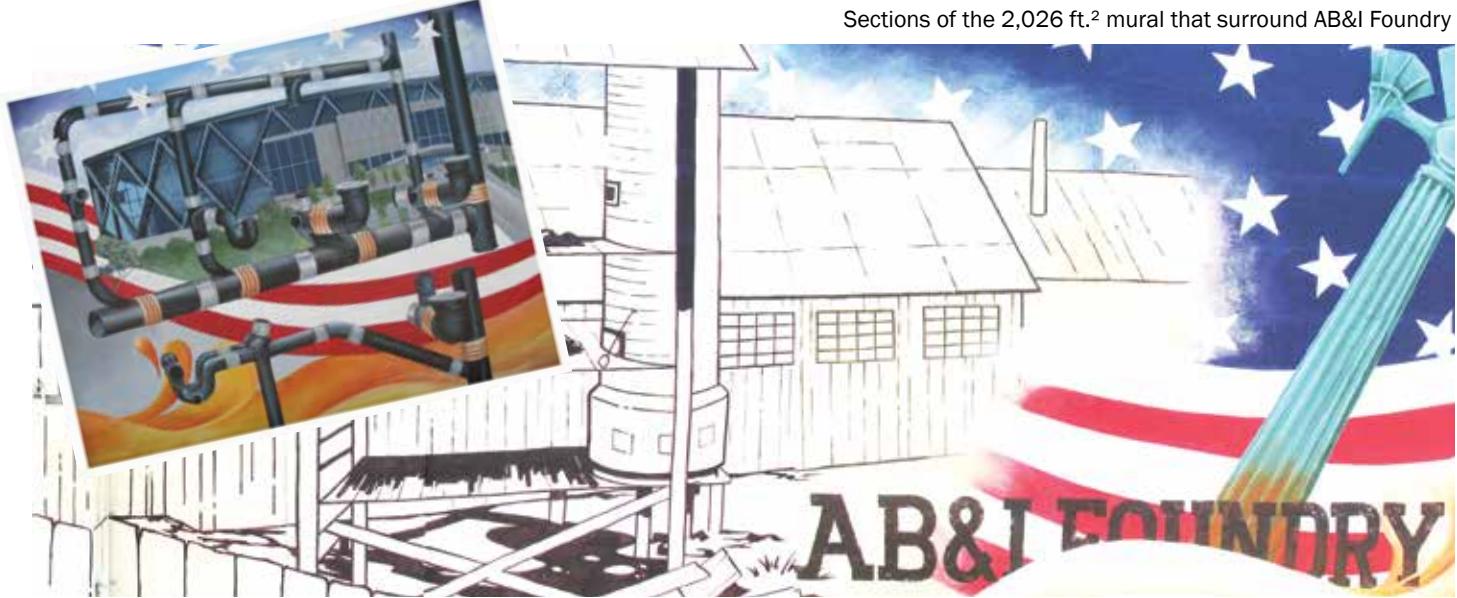

AB&I Foundry has been manufacturing cast iron soil pipe and fittings in America since 1906. We produce a full-line of standard and specialty cast iron soil pipe and fittings for drain, waste, and vent (DWV) plumbing systems. AB&I also provides custom gray iron foundry services for OEM manufacturers. All of our quality products are proudly made in the USA and meet all applicable ASTM and CISPI standards. Our basic principles embracing integrity and professionalism are what set us apart.

### Our Values

At AB&I, we believe in...

- Giving Team Members the chance to make decisions and learn from them
- Open communications and honest Team Member evaluations
- Sharing financial and business information with all Team Members
- Promoting a safe and enjoyable workplace
- The ability of every Team Member to make a positive contribution

## The Full-Line of Cast Iron Pipe and Fittings America Can Trust

AB&I has been a leading West Coast producer of cast iron drain, waste and vent systems for decades. Now the high quality pipe and fittings that have distinguished AB&I as an industry leader are available nationwide.

- Cast Iron No-Hub Pipe and Fittings
- SV Gaskets
- Cast Iron SV Pipe and Fittings
- Accessories

All AB&I products are 100% made in America. All of our products have been carefully engineered to meet the most demanding industry standards, and are accepted for use by all plumbing codes in every jurisdiction in the United States.

AB&I products are represented nationwide by an extensive network of Customer Service professionals, Regional Sales Managers, and Manufacturer's Representatives, thoroughly dedicated to providing the highest level of customer service.

## NSF-Certified to Ensure Full Standards Compliance

All AB&I cast iron pipe and fittings have been certified by NSF International to meet applicable CISPI and ASTM standards. As more and more products with questionable compliance records enter the domestic market, it is critical that engineers, contractors, and inspectors have the ability to distinguish between products that meet the standards and those that may not. NSF Certification provides this assurance, giving all parties the peace of mind that comes from knowing they are installing unquestionably-compliant cast iron.

## A Founding Member of the Cast Iron Soil Pipe Institute (CISPI)

AB&I has been a member of CISPI since its inception, and takes a great pride in helping sponsor this outstanding industry organization. CISPI has been instrumental in the promulgation of strong industry standards that have protected public health.

CISPI conducts three unannounced, rigorous inspections of AB&I's products and operations annually. By having both CISPI and NSF Marks, AB&I's products pedigree is second to none.

# CAST IRON ADVANTAGES

## Cast Iron: The preferred choice for every application, above or below ground.

### NON-COMBUSTIBLE, FIRE-RESISTANT

Cast iron is non-combustible and fire-resistant making it the safe choice for DWV systems. Cast iron is easy to install, and has superior durability often out lasting the life of a building. Its resistance to burning has the added benefit of requiring simple, low-cost fire stopping between the annular space between the pipe and wall penetration.

### QUIETER OPERATIONS

Cast iron is often referred to as the “quiet pipe” because of its inherent density it provides superior noise suppression. Cast iron effectively suppresses annoying “swooshing” sounds that result from effluents cascading down from upper floors, resulting in a higher quality installation and a more satisfied customer. This sound attenuation feature can be a major benefit in quality residential and commercial construction, where building owners and tenants understand the advantage of iron by the very first flush.

### STRONGER THAN OTHER MATERIALS

Cast iron is stronger, crush resistant, and longer-lasting than any other DWV piping material. Cast iron pipe installed over 300 years ago in many of Europe’s landmark buildings is still serviceable today, attesting to iron’s toughness and longevity.

### RESISTANT TO CORROSION

Cast iron has been proven to be resistant to corrosion, even in the harshest soil environments with the most challenging effluents.

### LOW THERMAL EXPANSION RATES

Cast iron expands and contracts in response to changing temperatures at a very low rate, reducing or eliminating the need for costly and time-consuming expansion joints.

# SUGGESTED SPECIFICATION

## **BELOW GRADE**

All drain, waste, vent, sewer and storm lines shall conform to the requirements of CISPI Standard 301\*, ASTM A 888\* or ASTM A74\*. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute or receive prior approval of the engineer.

Building or house sewers shall be of cast iron soil pipe and fittings from the building drain to the point of connecting with the city sewer or disposal plant. All pipe and fittings shall conform to the requirements of CISPI Standard 301\*, ASTM A888\* or ASTM A74\*. Pipe and fittings shall be marked with the collective trademark of Cast Iron Soil Pipe Institute or receive prior approval of the engineer.

## **ABOVE GRADE**

All drain, waste, vent, sewer and storm lines shall conform to the requirements of CISPI Standard 301\*, ASTM A888\* or ASTM A74\*. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute or receive prior approval of the engineer.

## **JOINTS**

- No-Hub Couplings shall conform to the CISPI Standard 310\* and ASTM A1277
- Heavy-Duty Couplings shall conform to the requirements of ASTM C1540
- Compression Gaskets for Hub & Spigot shall conform to the requirements of ASTM Standard 564\* and ASTM C1563\*
- Joints for pipe and fittings shall conform to the manufacturer's installation instructions and local code requirements

\* most current edition

RUFWALL  
**NO-HUB SPECIAL FITTINGS**

**RufWall Savings with Back Outlet Fixtures  
(Compared with Conventional Piping)**

- Fewer floor penetrations
- Eliminates cost of dropped ceilings to conceal pipe
- No scaffolding needed
- One-man installation
- Waist-high venting
- Water closet easier to install...faster

The **by-pass fitting** permits in-line piping to reduce width of the chase, and individual venting of the lavatories.

**Tub wye fittings** accept waste from two tubs and provide a common vent. They save space, materials and the labor to install duplicate systems.

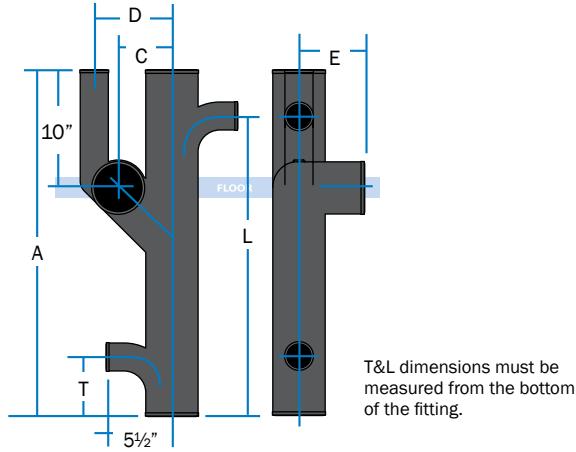

**NOTE:**

Rufwall fittings are sold and shipped as normal cataloged soil products.

This publication contains the information needed to place orders with your customer service representative.

# TRIM PACKAGE FOR STARTER FITTINGS

# TRIM PACKAGE FOR STARTER FITTINGS

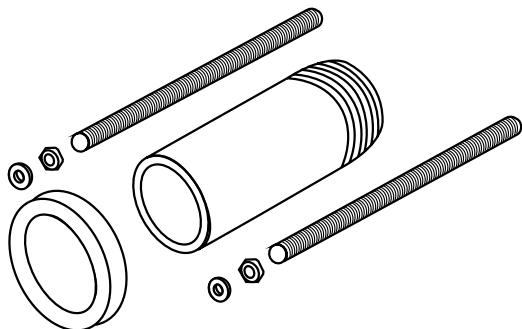

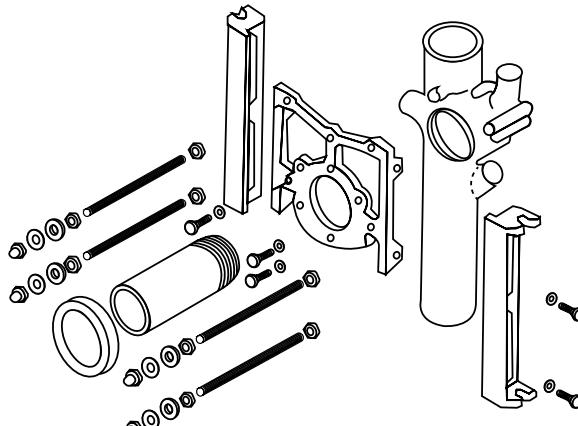

## EZS 24

**TRIM PACKAGE, WALL-HUNG BACK-OUTLET ASSEMBLY  
(to be used with PART NO. EZS 22 support frame assembly)**

- 1 – 4" PVC Sch. 80 NIPPLE with TEST CAP
- 1 – BOWL GASKET
- 4 –  $\frac{5}{8}$ " X 12" RODS
- 4 –  $\frac{5}{8}$ " CHROME CAP NUTS
- 8 –  $\frac{5}{8}$ " JAM NUTS
- 4 –  $\frac{5}{8}$ " FLAT WASHERS
- 4 –  $\frac{5}{8}$ " FIBER WASHERS
- 3 –  $\frac{3}{8}$ " X 1 $\frac{1}{2}$ " BOLTS FOR FACEPLATE
- 3 –  $\frac{3}{8}$ " FLAT WASHERS
- 4 –  $\frac{5}{8}$ " STAR WASHERS

## EZS 22 AND EZS 24 INSTALLATION INSTRUCTIONS

1. IDENTIFY THE MAJOR COMPONENTS OF THE EZS 24 TRIM PACKAGE AND EZS 22 SUPPORT FRAME.
2. SECURE EZS 22 SUPPORT FRAME TO INSTALLED STARTER FITTING USING  $\frac{3}{8}$ " X 1 $\frac{1}{2}$ " BOLTS AND  $\frac{3}{8}$ " FLAT WASHERS.
3. SECURE RIGHT AND LEFT LEGS TO THE EZS 22 FACEPLATE USING  $\frac{1}{2}$ " X 1 $\frac{1}{4}$ " BOLTS AND  $\frac{1}{2}$ " FLAT WASHERS IN POSITION SHOWN TO THE RIGHT.
4. ADJUST ASSEMBLY TO THE DESIRED HEIGHT. LEVEL AND ALIGN THE ASSEMBLY.
5. SECURE THE FEET OF THE EZS 22 SUPPORT FRAME TO THE FLOOR USING THE  $\frac{1}{2}$ " X 1 $\frac{1}{4}$ " BOLTS SUPPLIED.
6. SECURE SUPPORT LEG. FOR DOUBLE STARTER FITTINGS, THE SUPPORT LEG IS NOT REQUIRED.
7. SECURE  $\frac{5}{8}$ " X 12" EZS 24 THREAD RODS TO FACEPLATE ACCORDING TO EZS 22 FACEPLATE.
8. INSTALL EZS 24 THREADED NIPPLE TO THE EZS 700 OR EZS 800 FITTING.

## EZS 23

**TRIM PACKAGE, FLOOR-MOUNTED BACK-OUTLET ASSEMBLY  
(note: not to be used with PART NO. EZS 22 support frame assembly)**

- 1 – 4" PVC Sch. 80 NIPPLE with TEST CAP
- 1 – BOWL GASKET
- 2 –  $\frac{5}{16}$ " X 12" RODS
- 2 –  $\frac{5}{16}$ " HEX NUTS
- 2 –  $\frac{5}{16}$ " FLAT WASHERS
- 2 –  $\frac{5}{16}$ " CAP NUTS

# PIPE & FITTINGS INSTALLATION PROCEDURES

## No-Hub Coupling Installation Instructions

### Bracing

To prevent movement, horizontal pipe and fittings 5 inches and larger should be suitably braced by the use of blocks, rodging or other suitable methods at every branch or change of direction.

### Test

For best results, testing of one floor (ten feet) at a time is recommended. If more than one floor at a time is tested, the system should be properly restrained; all bends, changes of direction and ends of runs should be restrained.

### Coupling Material

No-hub sealing sleeves (gaskets) are made of Neoprene conforming to ASTM C564. Chemical characteristics of Neoprene assure that the gasket will not decay or deteriorate from contact with effluents in the pipe, or chemicals in the soil or air around the pipe.

### Material Specifications

**Bands:** Type 301 AISI Stainless Steel - Minimum tensile strength 165,000 psi.

**Screw Housing:** Type 301 Stainless Steel, 5/16" hex head slant shoulder.

**Shield:** Type 301 AISI Stainless Steel — Bright annealed; Rockwell B-100 (Vickers 240) minimum.

**Sealing Sleeve (Gasket):** The sealing sleeve shall be tested in accordance with ASTM D3677 and be manufactured from a properly vulcanized virgin compound where the primary elastomer is polychloroprene (neoprene).

1. Loosen screws, separate shield and sleeve.  
Slip shield over one spigot.

2. Insert spigots into sleeve. Be sure that both spigots butt on center retainer inside sleeve.

3. Position shield over sleeve, tighten screws alternately to proper torque.

# PIPE & FITTINGS INSTALLATION PROCEDURES

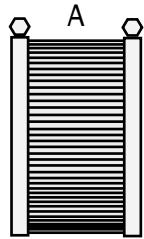

## No-Hub Coupling Installation Instructions Cont.

### Before Joining

1. Couplings should be installed with a calibrated torque wrench set at 60 inch pounds ( $1\frac{1}{2}$ " – 10") or 80 inch pounds (12" & 15").
2. When using field-cut pipe, the ends should be cut square.

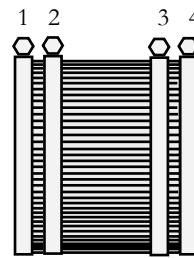

### Joining Procedure

1. Install the Neoprene sealing sleeve on one end of the pipe or fitting to be joined.
2. Place the stainless steel shield over the other end to be joined.
3. Insert both ends into the sealing sleeve until they butt against the molded center stop, inside the sealing sleeve.
4. Center the shield over the sealing sleeve and tighten as directed below.

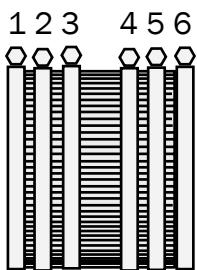

**1½", 2", 3", 4" sizes**

- A. Tighten bands alternately to 60 inch pounds torque

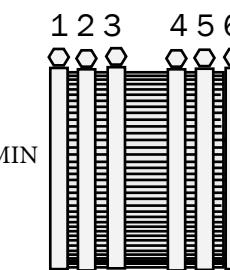

**5", 6", 8", 10" sizes**

- A. Tighten bands 2" – 3" alternately to 60 inch pounds torque  
B. Then bands #1 and #4 alternately to 60 inch pounds torque

**12" & 15" sizes**

- A. Tighten bands 3 and 4 alternately to 80 pounds torque  
B. Tighten bands 2 and 5 alternately to 80 inch pounds of torque  
C. Tighten bands 1 and 6 alternately to 80 inch pounds of torque

**Min-Max sizes**

- A. First torque the minimum side 3-2-1 and 3-2-1 again  
B. Then torque the maximum side 4-5-6 and 4-5-6 again  
C. Finally, torque 3-2 and 4-5 to 80 inch pounds

**ALL HORIZONTAL PIPE AND FITTINGS, 5 INCHES AND LARGER, SHOULD BE BRACED TO PREVENT MOVEMENT AT EVERY BRANCH OR CHANGE OF DIRECTION**

# PIPE & FITTINGS INSTALLATION PROCEDURES

## Cutting Instructions

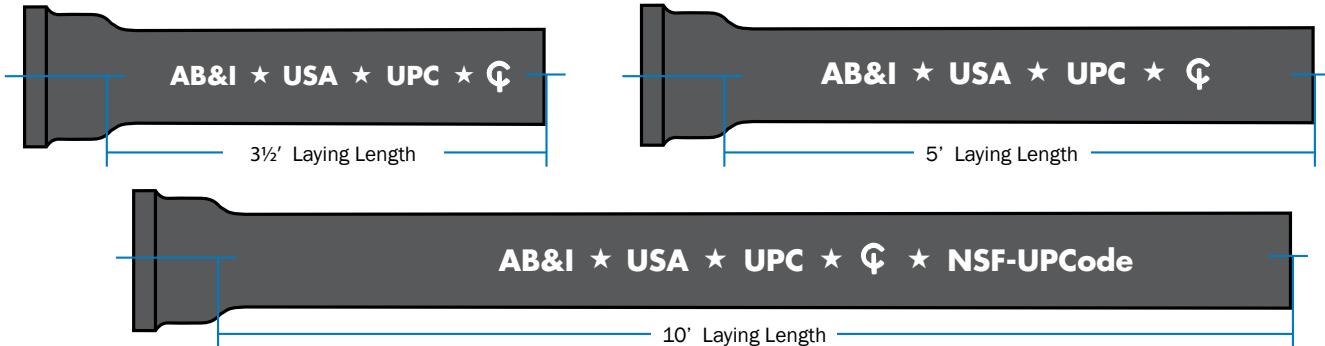

For best results, use a Twin-Lever Snap Cutter or a ratchet-type cutter equipped with a sharp chain and equally-spaced beveled cutting wheels. There are several methods that work well to cut Cast Iron Soil Pipe. When using the Twin-Lever Snap Cutter or ratchet-type cutter equipped with a chain and cutter wheels, make sure that they are sharp and the wheels will rotate in the chain. When using a cutoff-type abrasive saw, make sure to follow all safety procedures recommended by the manufacturer. At all times, read the safety instructions on any tool that is used to cut cast iron pipe.

### Cutting Procedure

1. Position chain around pipe so that the maximum number of wheels are in contact with the pipe. Too much space between the first and last wheel in contact with the pipe will produce a poor quality cut, so be careful when positioning the chain around the pipe.
2. Score the pipe before making the final cut, applying only enough pressure to make the cutter wheel create a deep scratch in the pipe.
3. Release the pressure and rotate the tool slightly; then apply a quick final pressure to complete the cut. To produce the best result, it may be necessary to score the pipe several times before making the final cut.

**Note:** If the cutter wheels become flattened or dull, it will be very difficult (if not impossible) to obtain a satisfactory cut. The life of the chain can be extended by reversing the chain to obtain equal use of all the wheels. It is also important to keep the mechanical features of a cutter in good working order. Proper safety equipment and attire is required.

# TRIM PACKAGE FOR STARTER FITTINGS

# TRIM PACKAGE FOR STARTER FITTINGS

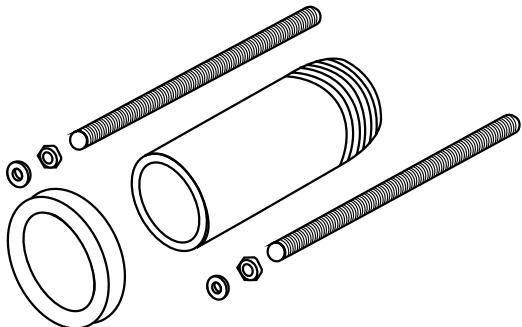

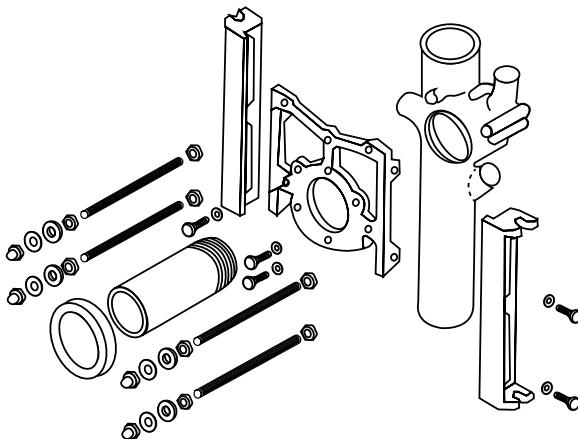

## EZS 24

**TRIM PACKAGE, WALL-HUNG BACK-OUTLET ASSEMBLY**  
(to be used with PART NO. EZS 22 support frame assembly)

- 1 – 4" PVC Sch. 80 NIPPLE with TEST CAP
- 1 – BOWL GASKET
- 4 –  $\frac{5}{8}$ " X 12" RODS
- 4 –  $\frac{5}{8}$ " CHROME CAP NUTS
- 8 –  $\frac{5}{8}$ " JAM NUTS
- 4 –  $\frac{5}{8}$ " FLAT WASHERS
- 4 –  $\frac{5}{8}$ " FIBER WASHERS
- 3 –  $\frac{3}{8}$ " X 1 $\frac{1}{2}$ " BOLTS FOR FACEPLATE
- 3 –  $\frac{3}{8}$ " FLAT WASHERS
- 4 –  $\frac{5}{8}$ " STAR WASHERS

## EZS 22 AND EZS 24 INSTALLATION INSTRUCTIONS

1. IDENTIFY THE MAJOR COMPONENTS OF THE EZS 24 TRIM PACKAGE AND EZS 22 SUPPORT FRAME.
2. SECURE EZS 22 SUPPORT FRAME TO INSTALLED STARTER FITTING USING  $\frac{5}{8}$ " X 1 $\frac{1}{2}$ " BOLTS AND  $\frac{5}{8}$ " FLAT WASHERS.
3. SECURE RIGHT AND LEFT LEGS TO THE EZS 22 FACEPLATE USING  $\frac{1}{2}$ " X 1 $\frac{1}{4}$ " BOLTS AND  $\frac{1}{2}$ " FLAT WASHERS IN POSITION SHOWN TO THE RIGHT.
4. ADJUST ASSEMBLY TO THE DESIRED HEIGHT. LEVEL AND ALIGN THE ASSEMBLY.
5. SECURE THE FEET OF THE EZS 22 SUPPORT FRAME TO THE FLOOR USING THE  $\frac{1}{2}$ " X 1 $\frac{1}{4}$ " BOLTS SUPPLIED.
6. SECURE SUPPORT LEG. FOR DOUBLE STARTER FITTINGS, THE SUPPORT LEG IS NOT REQUIRED.
7. SECURE  $\frac{5}{8}$ " X 12" EZS 24 THREAD RODS TO FACEPLATE ACCORDING TO EZS 22 FACEPLATE.
8. INSTALL EZS 24 THREADED NIPPLE TO THE EZS 700 OR EZS 800 FITTING.

## EZS 23

**TRIM PACKAGE, FLOOR-MOUNTED BACK-OUTLET ASSEMBLY**  
(note: not to be used with PART NO. EZS 22 support frame assembly)

## TY-SEAL LUBRICANT

Part No.	Size	Wt.
005117	Quart	2.5

- An excellent water-soluble joint compound. TY-SEAL LUBRICANT has demonstrated its efficiency in millions of joints.
- Quick and easy to use under all conditions... Even under water!
- Available in quarts, gallons and 25 pound pails.

## LUBRI/FAST® LUBRICANT

Part No.	Size	Wt.
005110	Quart	2.5

### LUBRI/FAST

- The unique LUBRI/FAST® formula makes joining TY-SEAL gaskets easier and faster because it's so slick! Applied as a liquid, LUBRI/FAST® actually reduces joining forces required; then it literally "fastens" the joint.
- LUBRI/FAST® is applied with an ordinary paint brush. It may be used for joining all pipe and fittings, and is required for joining all larger diameters 5" through 15".

## TY-TOOLS

Part No.	Description	Joins Pipe Size	Approx. Wt.
005223	4" w/ 4 x 2 & 4 x 3 adapter	2", 3", 4"	21
005438	6" w/ 6 x 4 adapter	4", 6"	29
005580	8" w/ 8 x 6 adapter	6", 8"	40

# PIPE & FITTINGS INSTALLATION PROCEDURES

## SV Hub & Spigot Installation Instructions

### Materials Needed

Proper, approved equipment and attire:

- AB&I cast iron soil pipe and fittings
- TY-Seal® or EZ-Tight® Gaskets
- TY-Seal® Lube or Lubri/Fast® Adhesive Lubricant
  - TY-Seal Lube® for sizes 2 inches through 4 inches
  - Lubri/Fast® Adhesive Lube for sizes 5 inches through 15 inches
- Brush for lubricant application

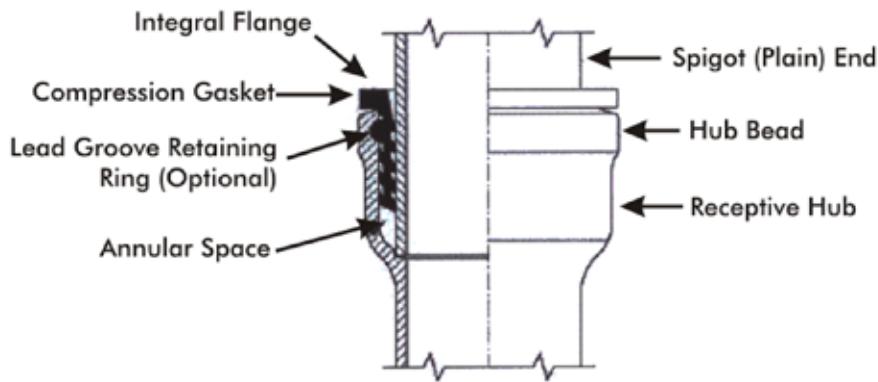

**Note: Lubri/Fast® Adhesive Lubricant may be used on all sizes of pipe and fittings**

**Lubri/Fast® is required when using 5 inches through 15 inches pipe and fittings**

### Installation

1. Clean the hub and pipe or fitting end to be joined. They should be free of dirt, mud, gravel, or other foreign material.
2. Insert the gasket into the hub. When joining 5 inches or larger pipe and fittings, apply Lubri/Fast® Adhesive Lubricant to the inside surface of the hub before inserting the gasket.
3. Lubricate the inside surfaces of the gasket and the outside of the spigot end to be joined using a brush. (Use TY-Seal® Lube for sizes 2 inches through 4 inches. Use Lubri/Fast® Adhesive Lubricant for sizes 5 inches through 15 inches).
4. Align the pipe and/or fittings to be joined. Push or pull the pipe or fitting spigot into the hub. You will feel the pipe or fitting “bottom out” at the hub. The assembly tool of your choice may be used.

**Note: If joining a cut piece of pipe, the sharp edges of the pipe must be “peened” with a hammer or filed to remove the sharp edge. Failure to remove the sharp edge on cut pipe will make assembly difficult.**

**Note: All gaskets specified meet or exceed the requirements of ASTM C564 and ASTM C1553**

# PIPE & FITTINGS INSTALLATION PROCEDURES

## Caulking Instructions

### Caulking Procedure

1. Insert the spigot end of pipe or fitting into the hub of pipe or fitting to be joined after wiping the hub and spigot with a clean cloth to assure the hub and spigot are clean and dry.
2. Yarn the oakum into the joint using a yarning iron. Some oakum comes in twisted lengths and may need to be separated into individual strands before yarning. Yarn and pack the oakum tightly using a packing iron to a depth of one inch below the top of the joint. Tightly packed oakum is essential for a leak free joint.

**Note:** After packing, make sure that no oakum fibers are sticking up into the area the lead will occupy. Fibers in the lead area can cause leaks.

3. After heating lead pot to a cherry red color, clean dross off the top of the lead and fill your ladle with clean, molten lead. Quickly pour the lead into the joint with one continuous pour, filling the joint completely.
4. After the lead has solidified, the joint must be caulked to “set” the lead. Using your outside caulking iron, place the iron against the inner edge of the hub and caulk the lead completely around the circumference of the joint. After caulking with the outside iron, you are ready to caulk using the inside iron. The inside iron should be placed against the pipe. Caulk the lead completely around its circumference.

**Note:** Care should be taken to not crack the hub by caulking too heavily. Proper safety equipment and attire are required. AB&I Foundry does not recommend the use of lead as it has been found to be hazardous to your health and the environment.

# THE FOUNDRY OF THE FUTURE SINCE 1906

From humble beginnings over a century ago, AB&I has grown into a leading producer of cast iron pipe, fittings, and custom castings.

Founded in 1906 by Joseph Boscacci in his backyard, the foundry had its start producing decorative street lamps and brass statues to replace those destroyed in San Francisco's Great Earthquake and Fire. As the foundry grew, it began producing sash weights and other cast iron and brass products.

With World War II approaching, it moved to its current location and modernized into a high-production foundry. Managed by the founder's sons, the Boscacci Brothers began producing 9-ton submarine nets which spanned major ports on the West Coast, including San Francisco Bay.

The post-war boom was led by unprecedented growth in construction, so foundry President Arnold Boscacci decided to begin making soil pipe and fittings on a large scale. To foster standards and higher quality, AB&I helped launch the Cast Iron Soil Pipe Institute (CISPI) and pioneered the production of no-hub pipe and fittings.

Today, AB&I is a thoroughly modern, technology-driven foundry committed to environmentally responsible manufacturing and team member safety. The same focus on the Golden Rule, personal relationships and customer service that built AB&I over the past century remains at the center of the company's culture, ensuring that AB&I will continue to be recognized as The Foundry of the Future.

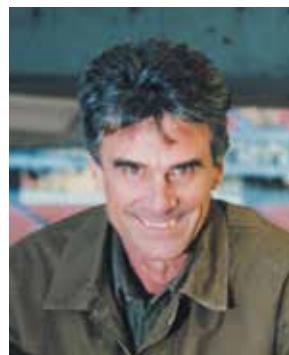

**Integrity** — That's the *AB&I Way*.

# WARRANTY

AB&I products are guaranteed to be free from defects in material and workmanship, and to conform to applicable standards and requirements. AB&I's liability is limited to the replacement of defective material acknowledged by AB&I to be defective to be defective, and presented for claim within reasonable time limits. Material found defective will only be replaced; no labor charges or damages will be allowed.

## IMPORTANT NOTICE:

AB&I Foundry will not be held responsible for any delays caused by work stoppage, trucking delays, raw material availability, acts of God or other unnatural causes beyond AB&I Foundry's immediate control.

**WARNING!** Testing with compressed air or gas in Cast Iron pipe and fittings may result in explosive failure and could cause severe injury or death. AB&I Foundry recommends hydrostatic testing as described in the CISPI Handbook.

**Never test Cast Iron pipe or fittings with compressed air or gas!**

## Cast Iron: A Truly Green Pipe System

By using ~100% post-consumer, recycled scrap iron as the raw material, AB&I pipe & fittings make a major positive contribution to the local environment, relieving the load on landfills and reducing the demand for energy by eliminating the need to mine and refine iron ore.

Additionally, the majority of the iron used in the production of AB&I products originates within 500 miles of production plant, further minimizing AB&I's environmental footprint.

## Four Distribution Centers Nationwide

We understand that product availability and fast delivery are critically important to distributors and contractors alike. That's why AB&I has established a nationwide network of distribution centers that put the full range of AB&I products in close proximity.

We certify that the cast iron soil pipe and fittings bearing our "AB&I" and "CI" markings are American manufactured and conform to the following specifications and reference standards:

- ASTM A-888
- IAPMO File No. 3270
- CISPI 301
- Certified by NSF to CISPI 301 & ASTM A74
- ASTM C-564
- DOD-4270
- ANSI A112.5.1
- CISPI H-74
- Federal Specification WWP 401F
- ASTM A-74, SV Hub & Spigot Reference Standard
